

Microfiber udder towel

The microfiber udder towel has a very good absorbency and capillarity, making it excellent in sucking up water and holding it until wrung out. Short wire loops prevent dirt and straw getting trapped in the towel. It is soft and comfortable for the teat yet with good cleaning capacity!

The blue towel has a fabric weight of 400 g/m², measures 31 x 31 cm and should be washed at 60°C. One pack contains 12 towels.
